测试技能竞赛题目

1 接口信息

测试接口地址(POST):

https://cpre2-api-stg.adidas.com.cn/preForMinistore/getPersonalizedProductLlistPage

测试接口参数:

```
{
"page_number": int,
"page_size": int,
"member_id": string,
"cookie_id": string,
"platform": any,
"filter_list": any,
"operation": any
}
```

测试接口 header:

```
{ "Authorization" : "Bearer {token}" }
```

token 信息:

post 调用 https://cpre2-api-stg.adidas.com.cn/authentification/gettoken

1/4

获取

token 接口参数:

```
{"application_id": "hypecore_sit", "secret": "Dtm28qR%k"}
```

测试接口业务正常返回值示例:

```
"success": true,
"resultCode": "0",
"resultMessage": {
"products": [
"article_code": "GW9093",
"model_type": "PROD_RANKING",
"comments": "跑步鞋类热卖第2名",
"ranking_type": "rn_all_ftw"
"article_code": "IW9432",
"model_type": "NORM_PROD",
"comments": "",
"ranking_type": ""
"recommendId": "1683688595073976-pplpA/0dbtw8mxz"
'remark": "SUCCESS",
"status": "OK"
```

测试接口业务异常返回值示例:

```
{
"success": false,
"resultCode": "1",
"resultMessage": {
"recommendId": "1683793083515918-pplpA/lzhp0cygv",
"products": []
},
"remark": "token error"
}
```

2 接口其它逻辑要求

- 1. 此测试接口为商品推荐接口,正常会返回两类商品(一般商品: NORM_PROD, 榜单商品: PROD RANGKING)
- 2. 豆腐块逻辑:业务逻辑会接受配置,在固定的 page_num,page_size 的时候会替换其对应位置的商品的值,配置信息如下:

```
[{"model_type": "REC_KEYWORDS", "page": 1, "comments": "", "location": 5}, {"model_type": "BROWSE_HISTORY", "page": 1, "comments": "", "location": 10}, {"model_type": "PROD_REC", "page": 2, "comments": "", "location": 9}, {"model_type": "WEEKLY_TOPSELLING", "page": 3, "comments": "", "location": 10}, {"model_type": "MONTHLY_REC", "page": 4, "comments": "", "location": 11}] 示例: 传参为 page_num: 1, page_size:10 原始返回为【1, 2, 3, 4, 5, 6, 7, 8, 9, 10】都为 NORM_PROD 或 PROD_RANGKING, 但是在豆腐块逻辑下, 会返回【1, 2, 3, 4, REC_KEYWORDS, 6, 7, 8, 9, BROWSE_HISTORY】(实际
```

业务中,前端依靠接口返回的商品进行展示,而豆腐块的目的是为了在固定位置展示广告)

- 3. 此测试接口为个性化接口,所以每一次接口返回的商品不一致,但是固定位置的豆腐块的值不变
- 4. token 有效期为 1 小时
- 5. member_id 和 cookie_id 至少存在一个
- 6. page_num 和 page_size 必填
- 7. page_size 的长度决定了返回值 products 的长度
- 8. platform、filter_list、operation 为接口兼容参数,必须有 key,但是 value 的值不限,不影响接口返回
- 9. recommedID 的位数固定为 32 位
